

Monitoring Well & Cable Route Warning Markers

Monitoring Well Marker (shown left) and the Cable Route Warning Marker (shown right) displayed with the optional Post Driver.

Monitoring Well & Cable Route Warning Markers are the ideal way to notify and warn others about the location of monitoring wells and underground cables. They are invaluable in providing safety and greatly assist in the reduction of accidental digging and costly service interruptions.

Constructed of a special fibreglass reinforced composite, the markers are lightweight, extremely durable and can handle vehicle impact, harsh weather, contact with wild animals and vandalism. This material is also able to endure small grass fires and controlled ditch burns; it will not soften and melt like plastic markers. The Monitoring Well & Cable Route Warning Markers are produced in an industry standard colour (bright orange) that will never fade, and the marker itself will never crack, rust, or rot like wood and metal markers.

An optional Post Driver for the marker offers quick and easy installation. This simple, two-handed tool, has an opening at the bottom where the marker is inserted and then driven into the ground with successive taps.

specifications

ITEM	DESCRIPTION
Material	Glass Reinforced Polyester Composite
Weight	0.62 lbs. per foot
Length	1.83 m (72 in.)
Width	.10 m (3.9375 in.)
Colour	Orange
